

Business of Biotech 201: From Molecule to Market, R&D and Regulatory Considerations

Description

Business of Biotech 201: From Molecule to Market, R&D And Regulatory Considerations builds on the business overview of the “Business of Biotech 101” course. This course delivers an outline of clinical, regulatory, and quality considerations and practices. Attendees will be provided foundational information about the Biopharma industry and regulations via instruction, storytelling, and breakout group discussions. Applied industry ethics will be discussed with emphasis on historical precedents. The course will explore the decision-making process by touching on relevant topics such as market share and phases of development.

Format

This interactive remote course occurs over three days, 2.5 hours per day. The course will remain remote until safe to return in person.
